-----------------	--

You may click “Network > Diagnostics” to test the network is available.

The screenshot shows the OpenWrt web interface. At the top, there is a navigation bar with 'OpenWrt', 'Status', 'System', 'Services', 'Network', 'Logout', and 'Asterisk'. Below this is a yellow warning box: 'No password set! There is no password set on this router. Please configure a root password to protect the web interface and enable SSH. Go to password configuration...'. The main section is titled 'Diagnostics' and 'Network Utilities'. It features three utility buttons: 'Ping', 'Traceroute', and 'Nslookup', each with a corresponding input field containing 'dev.openwrt.org'. Below these is a terminal window showing the output of a ping command to dev.openwrt.org (217.115.15.26). The output shows 5 successful pings with varying response times (431.002 ms to 468.694 ms) and 0% packet loss.

4. Click “Network > WIFI” to enter the General Setup and Advanced Settings.

Then click “Enable” to use this feature.

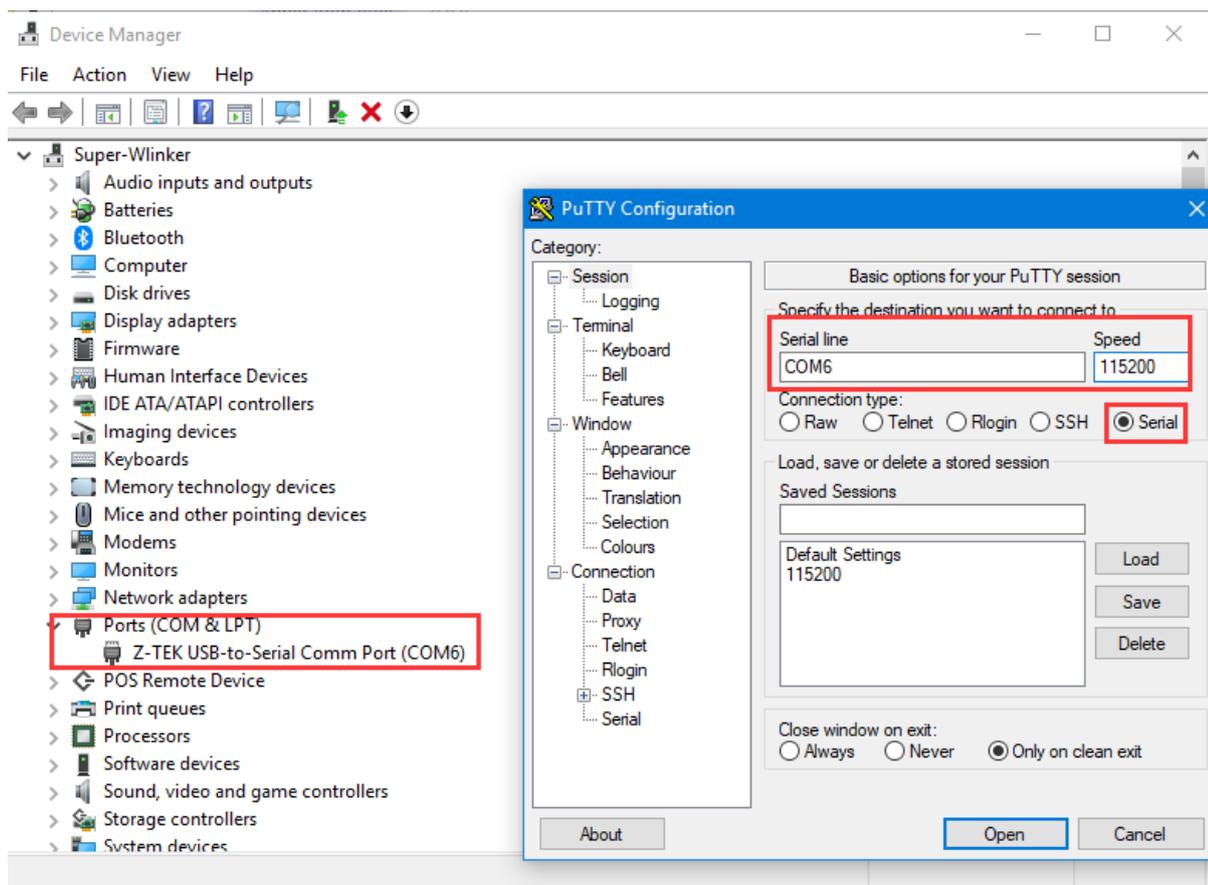

The screenshot shows the 'Wireless Network: Client "OpenWrt" (radio0.network1)' configuration page. The top navigation bar includes 'OpenWrt', 'Status', 'System', 'Services', 'Network', 'Logout', 'Asterisk', and an 'AUTO REFRESH ON' button. A yellow warning box is present at the top. The page title is 'Wireless Network: Client "OpenWrt" (radio0.network1)'. Below the title is a paragraph explaining that the 'Device Configuration' section covers physical settings like channel, power, and antenna, while 'Interface Configuration' covers encryption and operation mode. The 'Device Configuration' section has two tabs: 'General Setup' and 'Advanced Settings'. The status shows 'SSID: OpenWrt | Mode: Client' and '0% Wireless is disabled or not associated'. There is an 'Enable' button. The 'Operating frequency' section includes dropdowns for 'Mode' (set to 'N'), 'Channel' (set to '11 (2462 MHz)'), and 'Width' (set to '20 MHz'). The 'Transmit Power' is set to '23 dBm (199 mW)' with a 'dBm' icon below it.

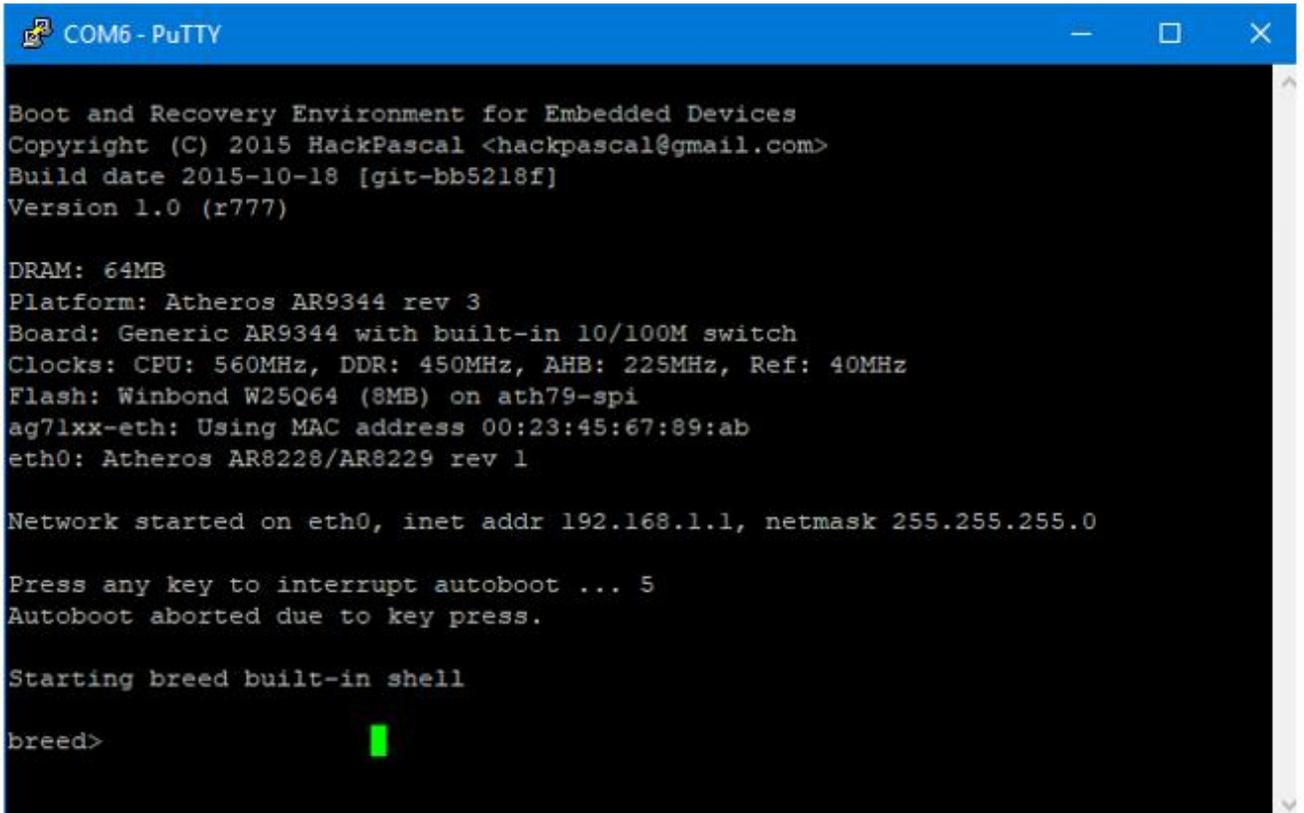

5. Upgrade

5.1 Connect router to PC via RS-232 cable and LAN2

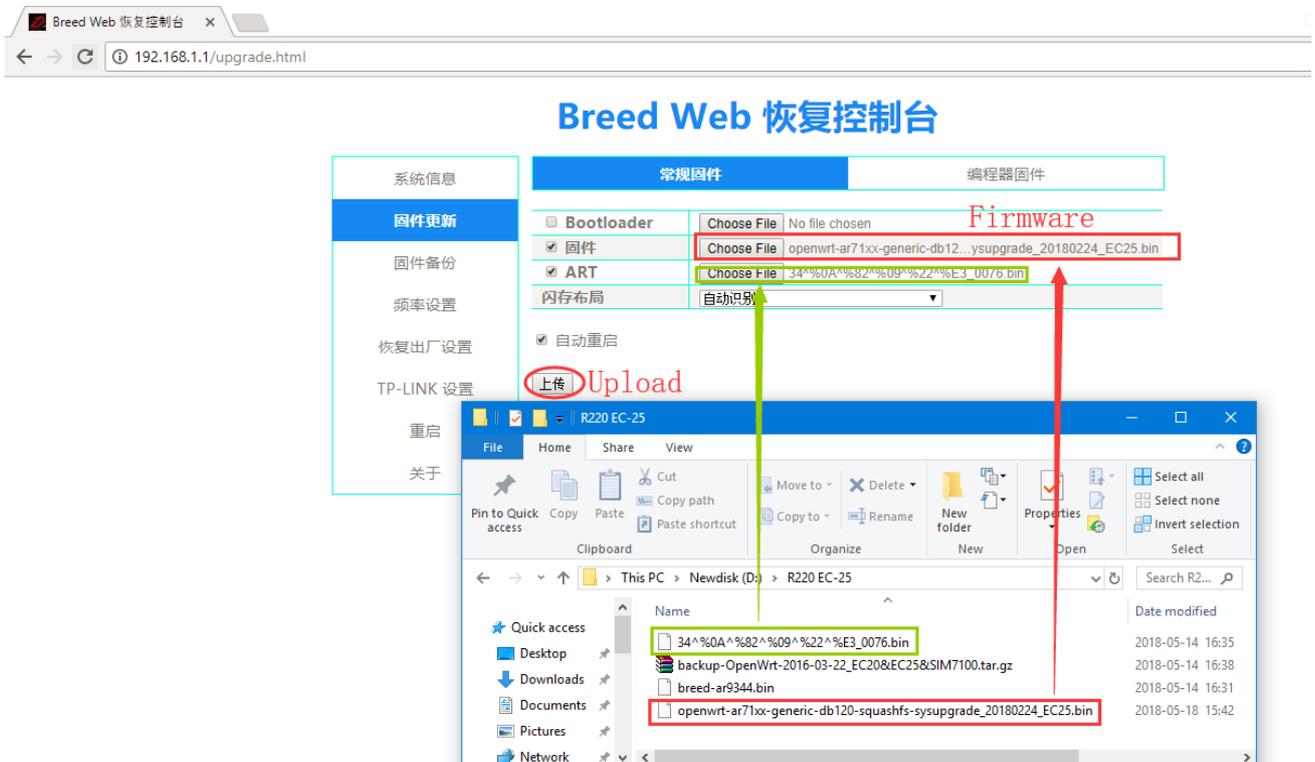

5.2 Open the PuTTY tool and keep spacebar press, then power on the router. Release the spacebar when the following appears.

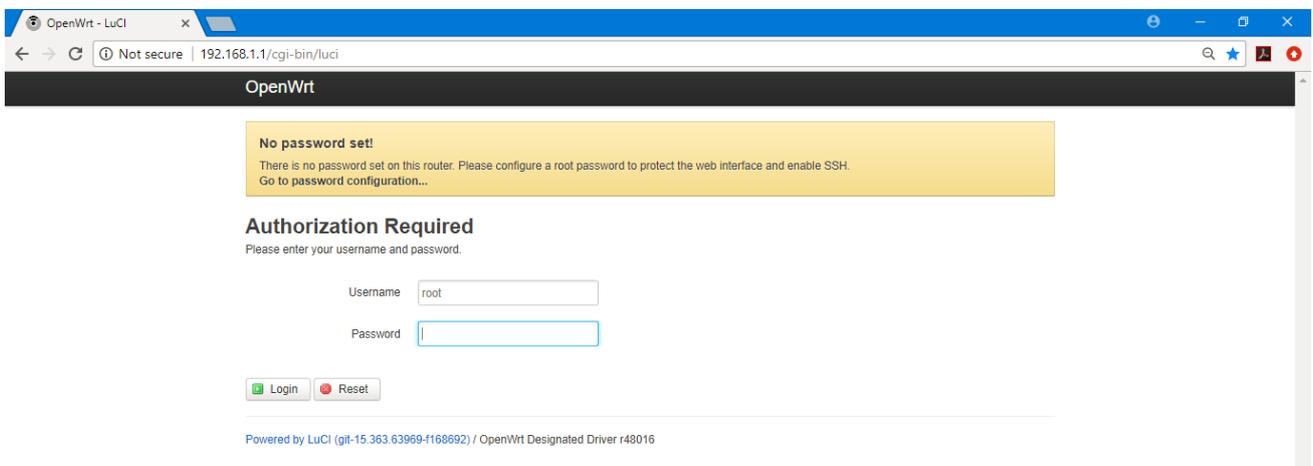

5.3 Access to 192.168.1.1 to complete firmware and ART file upgrade.

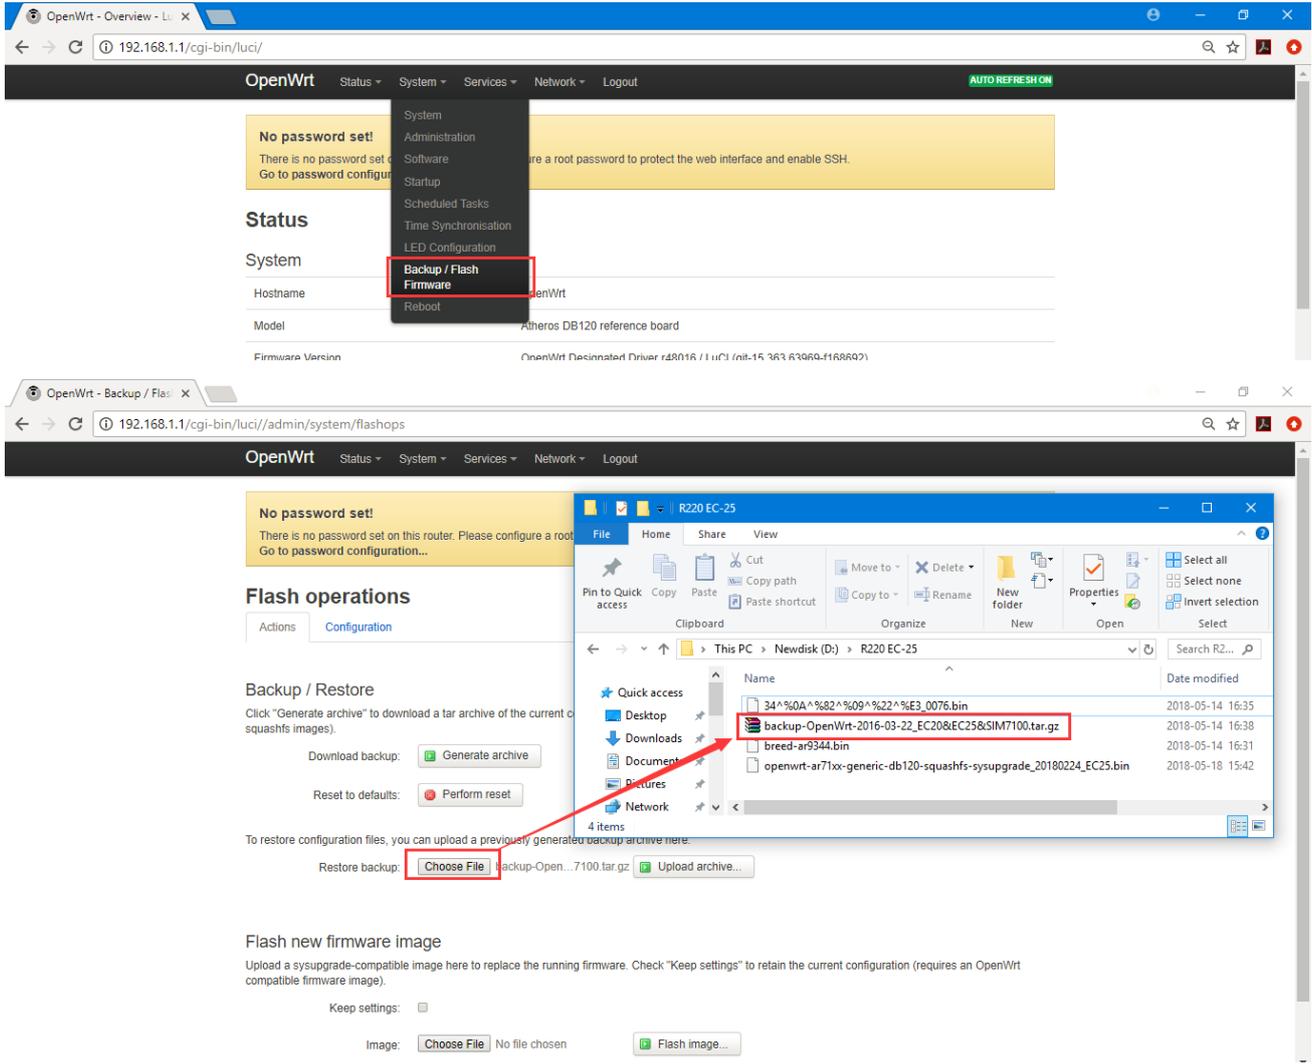

Click upgrade, wait until it is complete.

5.5 Login to router GUI while the updates is completed.

5.6 Finally, upgrade the configuration file.

----The end
